(Number of all deaths)	(20,296)	(20,726)	(22,045)	(23,719)	(24,267)	(25,028)	(26,129)	(26,837)	(27,686)	(28,940)	(29,323)	(44.5)

¹ Rates are presented per 100,000 persons 65 years and older.

² The five causes with the greatest number of deaths over the 1990-2000 period.

* Percent change from 1999.

Note: the cause-of-death titles are according to the Tenth Revision of the International Classification of Diseases (ICD-10). The causes of death for 2000 are classified by ICD-10, replacing the Ninth Revision (ICD-9) used during 1979-1999. The numbers in parentheses present **comparability modified data**: the annual number of deaths for 1994-1999 that would have been classified as influenza and pneumonia, had the ICD-10 classification system and coding rules been in place. The comparability ratio for influenza and pneumonia is 0.6982, a decrease of about 30.2 percent due to ICD-10. The comparability ratios for other causes of death in the above table are equal to 1.0. NA: comparability ratio is not available for years before 1994.
